

## Key Questions:

- What long-term expected return is desired for the Permanent Mineral Trust Fund ("PMTF")?
- What constraints are appropriate for the program? Should the 55\% equity cap be removed or reinterpreted?
- Should the current spending policy framework be amended for PMTF?

## PMTF \& Intergenerational Equity

## Maintaining intergenerational equity or attaining the "Full Objective" is defined as:

1. Maintaining economic value after inflation
2. Achieving $1 \%$ annual real growth to account for increasing resource demands (e.g. population growth)

## Probability of Attaining Full Objective

Funds should strive to reach and maintain a $50 \%$ probability of attaining the Full Objective in order to provide equitable opportunities across all generations.

| Probability |  |
| :---: | :--- |
| $0 \%-49 \%$ | Generations of tomorrow will likely have fewer benefits available relative to generations of today |
| $50 \%$ | Generations of tomorrow will likely have equal benefits available relative to generations of today |
| $51 \%-100 \%$ | Generations of tomorrow will likely have greater benefits available relative to generations of today |

## Full Objective for Permanent Mineral Trust Fund ("PMTF")

For PMTF, attaining the Full Objective would mean growing Fund assets from $\$ 7.3$ billion today to approximately $\$ 12.0$ Billion in Year 50.

Since the Full Objective is to achieve real growth, all subsequent data shown throughout this presentation is in real terms (after inflation).

## Spending Policy Analysis

## Current Interpretation of 55\% Equity Cap

As CREG contribution forecasts have decreased relative to the previous analysis, PMTF's median probability of attaining the Full Objective (1\% real growth per annum) in Year 50 is now 41.1\%, with a projected market value of \$11.0 Billion.

Under the previous (last year) modeling inputs, the probability was 58.4\%, with a projected market value of \$13.1 Billion in Year 50.

All data shown in real terms (after $2.50 \%$ annual inflation). Monte Carlo simulations assume PMTF is invested at the Target Allocation. Model assumes investment earning always meet or exceed annual spending policy amount. Contribution assumptions provided by the Consensus Revenue Estimating Group as of January 2016. Previous Analysis Contributions: $\$ 301.0 \mathrm{~m}$ in $\mathrm{Y} 1, \$ 308.4 \mathrm{~m}$ in $\mathrm{Y} 2, \$ 312.6 \mathrm{~m}$ in $\mathrm{Y} 3, \$ 316.6 \mathrm{~m}$ thereafter.

## Spending Policy Analysis

## Current Interpretation of 55\% Equity Cap

Year-over-year annual spending is projected to be relatively consistent, staying within $+8.2 \%$ and $-6.4 \%$ of the prior year's spending amount.

\% Change YoY Annual Spending<br>$5^{\text {th }}$ and $95^{\text {th }}$ Percentiles

$\square$ 5th Percentile $\quad$ 95th Percentile $\quad \square$ PMTF Target

## Spending Policy Analysis

Current Interpretation of 55\% Equity Cap
The median percentage change in year-over-year annual spending is $\mathbf{+ 1 . 4 0 \%}$ under the current spending policy framework and PMTF Target. If spending is $\$ 300$ million in any given year, the following year's spending is projected to fall within $\$ 322.1$ million and $\$ 283.0$ million.
\% YoY Annual Spending

|  | PMTF |
| :---: | :---: |
| Median (\% YoY) | Target |

## Spending Policy Analysis

## Removal of 55\% Equity Cap

Under the No Equity Cap portfolio, the median probability of achieving the Full Objective in Year 50 increases from 41.1\% to 56.7\%.

The projected market value at Year 50 increases from $\$ 11.0$ Billion to $\$ 13.2$ Billion.

## Spending Policy Analysis

Removal of 55\% Equity Cap
Although the No Equity Cap portfolio increases the probability of achieving the Full Objective, the volatility of annual spending from one year to the next is also projected to increase to $+10.6 \%$ to $-8.4 \%$ of the prior year's spending amount.

| Median Spending for Year 2 (\$M) | $\begin{gathered} \$ 304.2 \mathrm{M} \\ (+4.2) \end{gathered}$ | $\begin{gathered} \text { \$305.8M } \\ (+5.8) \end{gathered}$ |
| $5{ }^{\text {th }}$ Percentile Spending for Year 2 (\$M) | $\underset{(-17.0)}{\$ 283.0 M}$ | $\underset{(-22.1)}{\$ 277.9 M}$ |

## Spending Policy Analysis

Removal of 55\% Equity Cap + Expanded Alternatives
Under the Expanded Alternatives portfolio, the median probability of achieving the Full Objective in Year 50 increases from 41.1\% to 61.5\%.

The projected market value at Year 50 increases from $\$ 11.0$ Billion to $\$ 13.8$ Billion.

## Spending Policy Analysis

Removal of 55\% Equity Cap + Expanded Alternatives
Relative to the No Equity Cap portfolio, the volatility of annual spending from one year to the next modestly decreases for the Expanded Alternatives portfolio (+9.6\% to -7.1\% of the prior year's spending amount). However, both are still higher than the current PMTF Target (+8.2\% to -6.4\%).
\% Change YoY Annual Spending

## Alternative Spending Policy Models \& Sensitivity Analysis

## Reserve Account

## Purpose:

To set aside residual income and realized capital gains in excess of 5\% so that the funds may be used to supplement future spending in the event that income and realized capital gains fall short of the annual spending amount.

## Size:

At the end of Fiscal Year 2015, the Reserve Account balance was $\$ 207$ million, representing approximately $3.5 \%$ of the PMTF corpus. Sizing is limited to $90 \%$ of the annual spending policy amount.

## Years Cash on Hand:

If PMTF only received interest/dividends (without realized capital gains or severance tax income), the Reserve Account would only be able to sustain the projected FY 2017 spending level of $\$ 331.7$ million per year for 1.5 years.

Reserve Account Years Cash on Hand

## Alternative Spending Policy Models

No spending rule can simultaneously achieve all three goals of sovereign wealth funds: Asset Preservation, Budgetary Stability, and Intergenerational Equity.

One primary tradeoff of any spending rule is that reductions in the sensitivity to market volatility (Budgetary Stability) can increase the likelihood of spending that is inconsistent with large market peaks and drops in a given year (Intergenerational Equity).

Comparison of Spending Policies from 1995-2009

## Alternative Spending Policy Models

|  | PMTF Target (Current Policy) | No Equity Cap (Change from Current Policy) | Expanded Alts. (Change from Current Policy) |
| :---: | :---: | :---: | :---: |
| Current Framework: <br> $5 \%$ of trailing 5-year average market value |  |  |  |
| Cumulative 50 Year Distributions (\$B) | \$23.1 | $\begin{aligned} & \$ 25.9 \\ & (+2.8) \end{aligned}$ | $\begin{aligned} & \$ 26.6 \\ & (+3.5) \end{aligned}$ |
| Volatility of Annual Spending Changes (\% YoY St. Dev.) | 4.2\% | $\begin{gathered} 5.6 \% \\ (+1.4 \%) \end{gathered}$ | $\begin{gathered} 4.8 \% \\ (+0.6 \%) \end{gathered}$ |
| Projected 50 Year Market Value (\$B) | \$11.0 | $\begin{gathered} \$ 13.2 \\ (+2.2) \end{gathered}$ | $\begin{aligned} & \$ 13.8 \\ & (+2.8) \end{aligned}$ |
| Probability of Achieving Full Objective | 41.4\% | $\begin{gathered} 56.7 \% \\ (+15.3 \%) \end{gathered}$ | $\begin{gathered} 61.5 \% \\ (+20.1 \%) \end{gathered}$ |

## Yale Model / Hybrid Approach:

$80 \%$ previous year spending (adjusted for inflation) $+20 \%$ of $5 \%$ of trailing 5 -year average market value

| Cumulative 50 Year Distributions (\$B) | $\begin{gathered} \$ 23.1 \\ (-0.0) \end{gathered}$ | $\begin{aligned} & \$ 25.8 \\ & (+2.7) \end{aligned}$ | $\begin{aligned} & \$ 26.6 \\ & (+3.5) \end{aligned}$ |
| :---: | :---: | :---: | :---: |
| Volatility of Annual Spending Changes (\% YoY St. Dev.) | $\begin{aligned} & 2.7 \% \\ & (-1.5 \%) \end{aligned}$ | $\begin{gathered} 3.6 \% \\ (-0.6 \%) \end{gathered}$ | $\begin{aligned} & 3.2 \% \\ & (-1.0 \%) \end{aligned}$ |
| Projected 50 Year Market Value (\$B) | $\begin{aligned} & \$ 11.4 \\ & (+0.4) \end{aligned}$ | $\begin{aligned} & \$ 14.0 \\ & (+3.0) \end{aligned}$ | $\begin{aligned} & \$ 14.9 \\ & (+3.9) \end{aligned}$ |
| Probability of Achieving Full Objective | $\begin{aligned} & 45.6 \% \\ & (+4.2 \%) \end{aligned}$ | $\begin{gathered} 59.3 \% \\ (+17.9 \%) \end{gathered}$ | $\begin{gathered} 64.6 \% \\ (+23.2 \%) \end{gathered}$ |

## Sensitivity Analysis

The sensitivity analysis demonstrates that changes to any—or even just one—of the components impacting the long-term fiscal health of the Permanent Funds can have a substantial influence on the ability to provide and maintain intergenerational equity.

|  | Inflation | Contributions | Distributions |
| :---: | :---: | :---: | :---: |
| Baseline <br> (Probability of Attaining Full Objective in Year 50) | 2.5\%/year (41.4\%) | $\$ 85.7 \mathrm{~m}$ in Y 1 , \$150.7m in Y2, $\$ 257.0 \mathrm{~m}$ in Y 3 , \$257.1m thereafter (41.4\%) | $5 \%$ of trailing 5-year average market value (41.4\%) |
| Impact of UP move to assumption | 3.5\%/year <br> (16.1\%) | $\$ 85.7 \mathrm{~m}$ in Y 1 , $\$ 150.7 \mathrm{~m}$ in Y 2 , \$257.0m in Y3, \$257.1m in Y4, growing at 1\%/year (63.9\%) | 6\% of trailing 5-year average market value <br> (16.0\%) |
| Impact of DOWN move to assumption <br> If inflation is $1.5 \%$ over the next five years and then reverts back to $2.5 \%$, the | 1.5\%/year (69.0\%) | \$85.7m in Y1, \$150.7m in Y2, $\$ 257.0 \mathrm{~m}$ in Y 3 , \$257.1m in Y4, decreasing at 1\%/year (25.2\%) | $4 \%$ of trailing 5-year average market value (69.3\%) |

## Conclusion

- What long-term expected return is desired for the Permanent Mineral Trust Fund ("PMTF")?
- What constraints are appropriate for the program? Should the 55\% equity cap be removed or reinterpreted?
- Should the current spending policy framework be amended for PMTF?

If the equity cap is removed/reinterpreted, adopting a spending policy with additional smoothing elements may make sense.

## Appendix

## Spending Policy Analysis

Current Interpretation of 55\% Equity Cap
The median projected annual distribution in Year 50 is $\$ 546$ Million, with cumulative distributions over the 50 Year period at $\$ 23.1$ Billion.

Under the previous modeling inputs, the projected annual distribution in Year 50 is $\$ 647$ Million with $\$ 26.3$ Billion in cumulative distributions.

## Spending Policy Analysis <br> Removal of 55\% Equity Cap <br> The median projected annual distribution in Year 50 is $\$ 649$ Million, with cumulative distributions over the 50 Year period at $\$ 25.9$ Billion.

Under the current PMTF Target, the projected annual distribution in Year 50 is $\$ 546$ Million with $\$ 23.3$ Billion in cumulative distributions.

## Spending Policy Analysis

Removal of 55\% Equity Cap + Expanded Alternatives
The median projected annual distribution in Year 50 is $\$ 680$ Million, with cumulative distributions over the 50 Year period at $\$ 26.6$ Billion.

Under the current PMTF Target, the projected annual distribution in Year 50 is \$546 Million with \$23.3 Billion in cumulative distributions.

## Net Additions to Corpus - Portfolio Comparison

## New Spending Policy Changes

## Permanent Mineral Trust Fund

(Effective July 1, 2016)
No changes to actual dollars spent, only changing where funds will be transferred

- $2.5 \%$ of earnings guaranteed to the General Fund
- Up to $1.25 \%$ of earnings in excess of the $2.5 \%$ will go to LSPA and SIPA each, for a maximum total of 2.5\%.
- All residual earnings in excess of $5.0 \%$ will be transferred to the PMTF Reserve Account.

## Common School Perm. Land Fund

(Effective July 1, 2015)
No changes to total dollars spent, only changing where funds will be transferred

- At least $2.5 \%$ of earnings and up to $3 \%$ guaranteed to the SFP
- SFP Reserve Account receives residual earnings in excess of $3 \%$.

Federal Mineral Royalties - Automatic appropriation to the CSPLF-RA or SFP-RA from Federal Mineral Royalties above or below the $\$ 200$ million cap equal to the extent to which earnings exceed the spending policy amount, or in the case of the SFP RA exceed $3 \%$.

Effective July 1, 2014, excess over 90\% of spending policy amount held in the PMTF \& CSPLF Reserve Accounts will be directed back to their respective corpus - effective immediately (previously, the excess over 75\% was transferred).

## PMTF Spending Policy, Effective FY17

## CSPLF Spending Policy, Effective FY16

## Spending Policy Terms

General Fund: Receives $2.5 \%$ of PMTF and CSPLF earnings of the previous five-year average market value of the corpus. Funding of the General Fund receives priority over the SIPA and LSRA within PMTF and SFP within CSPLF.

Strategic Investments and Projects Account (SIPA): Created by 2013 Wyoming Session Laws, Chapter 73 , Section 4, Section 300 (e). Receives up to $1.25 \%$ of PMTF earnings in excess of the first $2.5 \%$ of the previous five-year average market value of the corpus. Funds within the account shall only be expended by legislative appropriation. The governor may include appropriation requests from funds available within the SIPA within his biennial budget requests for one-time expenditures as deemed necessary.

Legislative Stabilization Reserve Account (LSRA): Receives up to $1.25 \%$ of PMTF earnings in excess of the first $2.5 \%$ of the previous five-year average market value of the corpus. Created by 2005 Wyoming Session Laws, Chapter 191, Section 4, Section 301 (d). Funds within the account shall only be expended by legislative appropriation.

School Foundation Program (SFP): Receives at least 2.5\% and up to 3\% of CSPLF earnings in excess of the first $2 \%$ of the previous five-year average market value of the corpus. Created by 2014 Wyoming Session Laws, Chapter 26, Section 300 (g). Funds within the account shall only be expended by legislative appropriation. Funds within the account shall be invested by the state treasurer and all investment earnings from the account shall be credited to the general fund.

[^0]:    Spending data is shown in real terms (after $2.50 \%$ annual inflation). The annual spending policy amount for PMTF during FY 2015 was $\$ 284$ million.
